ORMED | MIS Supply Chain Management

Powerful and Integrated Supply Chain Functionality for Healthcare

Address Escalating Demand with an Improved Supply Chain

Healthcare faces a resource shortage in the wake of escalating demand for excellent, timely patient services.

Finding a way to manage this growing demand is important to everyone if we're to respond to the changing needs in healthcare, and the supply chain process-from source to settlement-is the ideal place to start.

Levels of an efficient Supply Chain

1. Best Practice:

Focuses and promotes best practice model with every stake holder within your supply chain links inside and outside your organization.

2. Striving for Excellence:

Looks within your link for opportunities to remove boundaries or barriers between in the pursuit of continuous process improvements.

3. Providing Data Visibility:

Should open your organization to the information that needs to be shared with other members of your supply chain and revealing what is and isn't working.

4. Encourages Collaboration:

Working with other stake holders to maximize customer satisfaction and drive out costs throughout your supply chain.

5. Provides Synthesis:

Synchronizing new ways of thinking and strategies to provide even greater cost reduction and enhanced customer satisfaction. Focus on ways to optimize your links by sharing experiences, technology, best practices, and investing in each other.

6. Demonstrates Velocity:

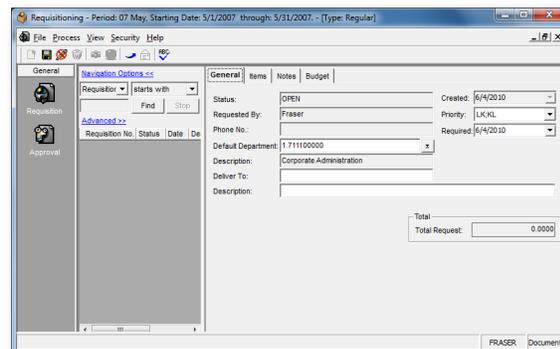

Reduce the lead-time to incorporate continuous improvements throughout the supply chain and promote ease of use and innovative technology to achieve swift and efficient processes improvements.

Introducing ORMED | MIS Supply Chain Management

ORMED | MIS Supply Chain Management, a part of the award-winning ORMED | MIS healthcare software solution, presents the total supply chain in a robust and easy-to-use environment, empowering your staff with built-in best practices.

ORMED | MIS Supply Chain Management emphasizes and makes apparent the process efficiencies needed to:

- Reduce the loaded cost of supplies
- Reduce wasted time and dollars on inefficient, manual processes
- Improve staff productivity and morale
- Enhance patient outcomes
- Enhance inventory management techniques with "just in time" and "consignment"
- Reduce data entry errors with a one of kind electronic document processing

Visibility through Integration and Automation

All ORMED | MIS software suites, including Supply Chain Management, are designed from the ground up with powerful integration and thoughtful automation, ensuring a seamless transition to improved, best practice supply chain processes. All data is centralized and automatically moved through the system as required:

- Multi-level approval hierarchy encompasses even the most complex organizational chart.

- Requisitions are approved, issued from inventory and committed to purchase order without having to rekey any information.
- Non stock items can be sent directly to the custom order batch for purchase order consolidation.
- Purchase order batches can be posted and electronically communicated with the use of an email address or with standard EDI connections.
- The receiving process is automated when vendors enable the EDI 856 standard
- Catalogue updates are also automated when incorporating EDI 832 standard Price Sales Catalogue.
- Stock status updates are in real time when issues and receipts are created.
- Reconcile invoices with a few mouse clicks instead of chasing paper trails.
- An EDI 810 invoice is imported to the reconciliation process and eliminates the need for manual reconciliation.
- Auto-match process of EDI 810 invoices to receipt removes the number of discrepant invoice reconciliations required.

Manage Data Flow and Customized Reporting

With ORMED | MIS Supply Chain Management, you're running a robust, rock-solid supply chain system that will never let you down.

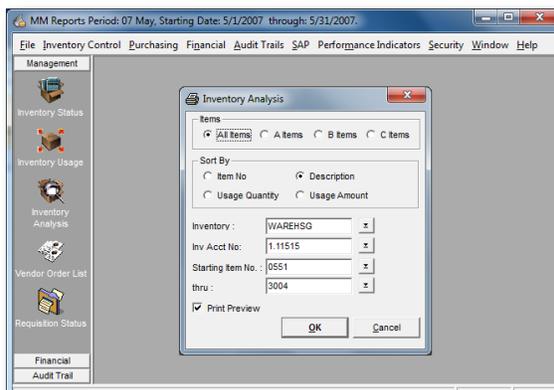

- Fully customizable data filtering (*by user or type of user*) keeps everyone focused—across multiple sites and organizations—without information overload
- Stay fully informed at all times and trust every number, with deep drill-down to the source of every transaction
- Complete audit trails ensure you can track every action

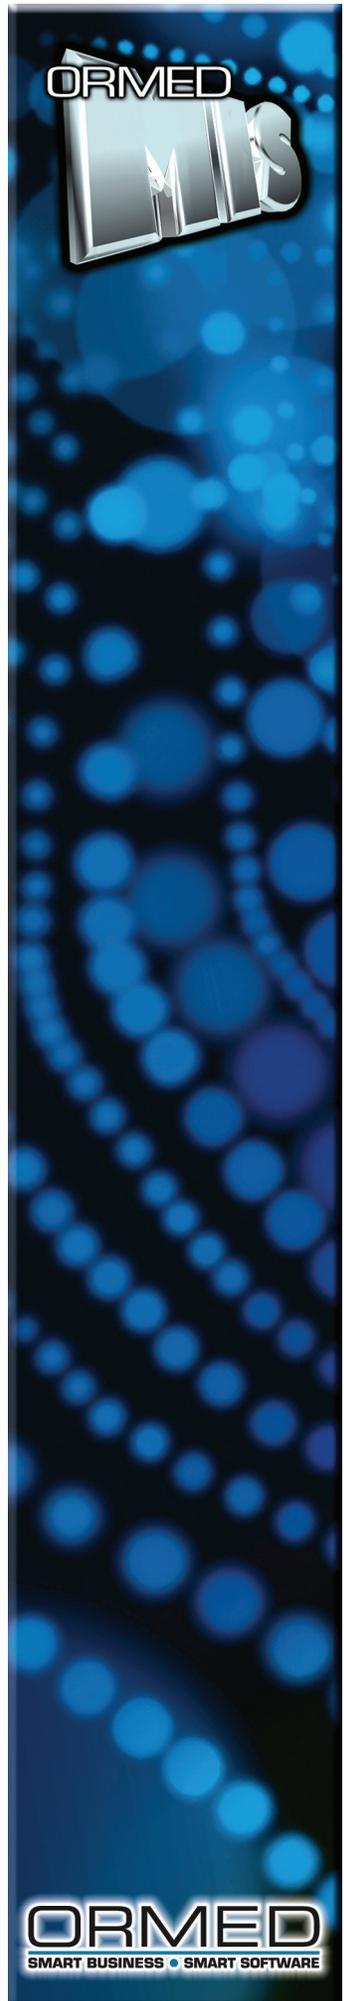

Preparing a new electronic purchase order

Controlling your Supply Chain

Using ORMED | MIS Supply Chain Management, supply chain costs are reduced by automating and integrating the requisitioning, contracting, purchasing, reconciliation, and payment processes. Consolidated supply chain management—centralized contracting, purchasing, warehousing, and payables, with decentralized receiving—increases negotiating leverage, keeps inventory levels down, and reduces stock-outs. Full integration with ORMED | MIS Finance Management and the E-Commerce Business Center ensures an up-to-date accounting system.

Customizing an inventory analysis report

Leading the Industry

ORMED | MIS employs forward-thinking, healthcare supply chain experts with the skills, experience, and vision to design the best supply chain management software in the industry:

- Unlike competing products that force organizations to make compromises between functionality and integration, only ORMED | MIS offers best-in-class modules with seamless integration
- Unlike competitors that force organizations to choose between the benefits of on-demand products and on-premises deployments, only ORMED | MIS gives you the flexibility to choose on-demand, on-premises, or any preferred combination
- Unlike competing products that create extra manual work and errors in the sourcing processes, only ORMED | MIS lets buying experts automatically create sourcing events from requisitions or expiring agreements, and only ORMED | MIS lets you negotiate with a click; competitors force you to use the clipboard
- Unlike competing products that force rigid centralization or decentralization, only ORMED | MIS provides true center-led procurement by decoupling the physical and logical location of key procurement activities

Award-Winning Software

ORMED | MIS Supply Chain Management has the commendations to back itself up:

- **Best Supply Chain Management System:** Intelligent Enterprise Readers' Choice Award, 2007
- **Supply Chain Software Award:** Supply Chain Asia Logistics Awards, 2007
- **Best Supply Chain Software Solution Provider:** Supply Chain Excellence Awards organized by SCM Logistics World, 2006
